
Recovery and Thinking Styles of Individuals with Anorexia Nervosa

Researcher: Amy Price
Supervisor: Professor Stephen Touyz

We are looking for individuals over the age of 16 with a past diagnosis of Anorexia Nervosa who are now **fully recovered** to participate in a study examining how approaches to cognitive tasks vary over different stages of AN and compare to approaches used by individuals without a history of eating difficulties. Participants in this study will complete state of the art neuropsychological tests representing the cutting edge of research in factors influencing the development and recovery of Anorexia Nervosa. The data from this comprehensive assessment can be provided to you or a treating clinician free of charge. The total estimated participation time is 60 minutes.

If you are interested in participating please contact the researcher on apri5224@uni.sydney.edu.au.

(Participation in this study is subject to confirmation of recovery as per internationally recognised criteria).
